SUBJECT INDEX

Absorption coefficient 109–11
  effect on radiative heat flux prediction 111–13
  gray 109
Acetaldehyde, spontaneous ignition of 189–91
Acetylene 215–16
  methane-based production 239–40
Adaptive grid method 278–87
Assumed shape pdf model 258–9

Beer–Lambert's law 109, 129
Bifurcation 165
Bouguer's law 109, 129
Boundary layer diffusion flames 135–6
Branching chain–thermal interactions 173–9
  concentration–temperature phase-plane portraits 176
  in CSTR 176–7
  relationship of critical criteria to classical thermal and isothermal branching reactions 173–5
  with complex overall temperature dependences 184–6
Bubbly jets 323–6
  measurements of Sun and Faeth 323–4
  measurements of Sun *et al.* 324–6

Chain branching interactions, isothermal 183–4
Chain branching reactions
  non-isothermal 177–9
  regimes of oscillatory reaction and their interpretation on a thermal diagram 179
Chain–thermal interactions 183–4
Chemi-ionization 238–9
Chemical kinetics 199–248
Closed vessels
  exothermic reactions in 163–7
  instability in consecutive reactions 166–7
  thermal ignition in 163–4
  unstirred 180
CO formation 240–3
Coal-fired furnaces 146–9
Coal flames 134–5
CO–H_2 system 256
CO/H_2/air combustion model 261
CO/H_2/air system 257
Combustion duration 65–6
Combustion front, propagation across cylinder 69–72
Combustion gases, radiation heat transfer 107–13
Combustion initiation, random time delay in 64
Combustion models 255–69
  CO/H_2/air 261
Combustion products, radiation heat transfer 106
Combustion promotion, experiments and calculations related to 234–8
Compression ratio vs Taylor microscale 52–3
CONCERT code 273, 287
Conservation of radiant energy equation 104
Continuous gaseous turbulent combustion 249–92
  governing equations 252
  numerical techniques for complex flow 269–71
Continuous-flow stirred-tank reactor (CSTR) 92, 163, 179–80
  acetaldehyde oxidation 189
  branched chain–thermal reaction 176–7
  exothermic reactions 167–73
    adiabatic conditions 168–9
    criteria for criticality and instability 172–3
    local stability of stationary-states 170–2
    non-adiabatic conditions 169–70
  gas-phase oxidations 180
Control volume formulation 270
Convection–radiation interaction 136–8
Cool flames 75–96
  and knocking 91–2
  chemistry of 85–9
  experimental techniques 77–80
  history 75–6
  kinetic models 89–91
  negative temperature coefficient 178
  phenomenology 80–5
  stable oscillatory 179
  thermokinetic models for 189–91
  unified interpretations of 188–94
Coupling and solution algorithm 273

Delta–Eddington approximation 120
Delta–M approximation 120
Dense-dispersed jets 335–42
  breakup processes 338–40
  breakup regimes 335–6
  collisions 340
  flow patterns 336–8
Dense-spray analysis 340–2
Deterministic separated-flow (DSF) analysis 298, 303–4
Diesel engines, radiation heat transfer 151
Dilute dispersed flows
  alternative analysis of 330–5
  analysis of 297–309
  analysis of turbulence 298–9
  combusting flows 300–2
  formulation 297–8
  noncombusting flows 299–300
  state relationships 299–302
  structure of 309–26
Dirac-delta phase approximation 120
Discrete-element analyses 333–5
Discrete-element approximation resistance–capacitance circuit 10
Discrete-ordinate approximation 129–30
Discretization schemes 270
Dispersed-phase trajectory analysis 307–8
Dissipation rate 254
Ditertiarybutyl peroxide 182
Dynamic stability, Liapounov theory on 92

Ecological aspects of combustion processes 240–3
Eddy viscosity model 252–3
Emission coefficient 109–11
  gray 109
Ethane 217–20
Ethylene 216–17
Exothermic reactions
  in closed vessels 163–7
  in CSTR 167–73
    adiabatic conditions 168–9
    criteria for criticality and instability 172–3
    local stability of stationary-states 170–2
    non-adiabatic conditions 169–70

Fast chemistry 256
Finite difference operators 271–3
Fires as combustion systems 151–3

Flame propagation
along vortex tubes 69
one-dimensional approximation 228
two-dimensional approximation 228
Flame radiation 139–40
unwanted fires 151–3
Flame wall-quenching of condensed fuels 133–4
Flames, visual observation of 53–8
Fourier analysis 9

Gas-phase oxidations 180
Gas turbine combustors 149–51, 277
Gradient transport models 253–4
Gray absorption coefficient 109
Gray and Yang model 191–2
Gray emission coefficient 109
Gray gases 109
Grid generation 276

H_2/air system 257
H–C–N–O system 220–2
H–C–O system 210–20
Heat-flux calculation from surface temperature data 9
Heat transfer *see* internal-combustion engine heat transfer; radiation heat transfer
Henyey–Greenstein approximation 120
HNO_3 oxidant 222
H–O system 200–10
H_2O_2 oxidant 222
Hopf bifurcation 94, 166, 172–3, 183
Hottel's charts 109
Hydrocarbons
chemical kinetic models 268
production in combustion processes 240–3
spontaneous ignition of 192–4

Industrial furnaces 142–6
Internal-combustion engine heat transfer 1–46
adiabatic engines 37–9
amplitude reduction and phase shift 10
diesel engine 4
electrical analogy 10
exhaust emissions 4
exhaust system 29–30
experimental methods 6–14
experimental status 39
four-stroke cycle 2
future work 39
general concepts 2
heat release model 4
homogeneous charge engine 4
impact on design and performance 2
influence of deposits 13–14
influence of instantaneous distribution 5
insulated engines 37–9
intake system 29–30
models 14–37
gas-exchange process 21
global 15
comments on 22
empirical correlations 16
semi-empirical correlations 16
multi-dimensional 27–9
fired cylinder 28–9
motored cylinder 28
one-dimensional 26–7
open-chamber 16–21
prechamber 21
radiation 34–7
zonal 24–6
numerical solution 10
piston temperature measurements 11
Q/Q_f 5
radiant heat-transfer measurements 12–13
radiation 30–4
signal transmission from piston 11–12
steady heat-flux measurements 11
theoretical status 39
thermal stress problem 5
time-averaged heat flux 23–4
Internal-combustion engines 151
Interpenetrating-continua analyses 330–3

Kinetics mechanisms, of oxidation 199–248
Knocking, and cool flames 91–2

Laminar diffusion flames 136–8
Laminar flame propagation 225–6
Laminar flamelet model 269
Laminar flow tubes 181
Laser–Doppler anemometry (LDA) 312–13
Legendre polynomials 119–20
Liapounov theory on dynamic stability 92
Linearly anisotropic scattering 120
Local thermodynamic equilibrium 100
Locally homogeneous flow analysis 297, 302–3, 340–1

Methane 210–13
Methane-based production of acetylene and synthesis gas 239–40
Methyl alcohol 213–15
Methylamine 220–2
Mixing-length methods 330
Mixing process 227
Mixture motion, measurement of 51–3
Monte Carlo method 129–30
Multi-dimensional models 145–6

Narrow-band models 107
Nitric oxide formation 240–3, 262–6
Non-orthogonal curvilinear grid system 277
Non-premixed jet flames 258
Numerical boundary conditions 276

Oxidation, kinetics mechanisms of 199–248

$(p–T_a)$ ignition diagram 184
in closed vessels 186–7
peninsula in 178
significance of 179
Partial-equilibrium models 256–8, 266–7
Particle-laden gas jets 309–15
measurements of Laats and Frishman 310–12
measurements of Levy and Lockwood 312–13
measurements of McComb and Salih 310
measurements of Shuen *et al.* 313
measurements of Yuu *et al.* 309–10
Particle-laden water jets 322–3
Particles, radiation heat transfer 115–16
Plug flow model 145
Pollutant formation in combustion 240–3
Polydispersions
radiation heat transfer 113–21
types and shapes of 114–15
Polymethylmethacrylate (PMMA) 134
Polyoxymethylene 134
Polypropylene 134
Pool chemical approximation 166–7
Porous medium, combustion and radiant heat transfer 140–1

Pulverized-char flames 134–5

QUICK scheme 271, 272

Radiant heat ray method 129
Radiation–convection interaction 136–8
Radiation heat transfer 97–160
  applications to combustion systems 133–41, 141–53
  combustion gases 107–13
  combustion products 106
  diesel engines 151
  particles 115–16
  polydispersions 113–21
  scattering phase function 119–21
  solution methods
    comparison of methods 130–3
    flux methods 124–30
      discrete-ordinate approximation 129–30
      moment methods 126–7
      multiflux models 125–6
      spherical harmonics approximation 127–8
    hybrid methods 129–30
    Monte Carlo method 129–30
    statistical methods 123
    zonal method 123–4
  total properties 121–2
Radiation/turbulence interaction 104–6
Radiative transfer equation
  solution methods 122–33
    exact models 122–3
Radiative transfer equation 100–4
Rapid compression machines 181

Saddle-node bifurcation 165, 178, 182
Sal'nikov's model 166–7
Sauter Mean Diameter (SMD) 317
Scattering phase function 119–21
Separated-flow analysis 297, 303, 341–2
SIMPLE algorithm 250, 270, 276
Single-droplet combustion 133
Single-stage ignition 187–8
Small-scale turbulence 47–73
  compatibility with relationships for locally isotropic turbulence 58
  structure of 58–60
Solid-particle combustion 133
Spark ignition engine combustion, length and velocity scales 60
Spherical harmonics approximation 127–8
Spontaneous ignition 178
  conditions for 181
  detailed kinetics mechanisms 223
  experimental investigations 179–88
  mean features of 181
  of acetaldehyde 189–91
  of hydrocarbons 192–4
  unified interpretations of 188–94
Sprays
  combusting 319–22
  evaporating 317–19
  mixing, transport and combustion in 293–345
  nonevaporating 315–17
Stabilization limits 224–5
Staggered grid 269
Stirred vessel model 143–4
Stochastic separated-flow (SSF) analysis 298, 304–9
Surface heat-flux measurements 6
Surface thermocouples 6
  coaxial type 6
  film type 8
  pair-wire type 7
  thermistor probe 8
Synthesis gas, methane-based production 239–40

TEACH code 250, 269, 270, 287
Tennekes model of turbulence 58
  combustion implications of 59–60
  experimental evidence in support of 59
Thermal ignition in closed vessels 163–4
Thermistor surface thermocouple probe 8
Thermokinetic interactions 161–97
Thermokinetic models for cool flames 189–91
Total absorptivity–emissivity models 109
Transport approximation 120
Tridiagonal matrix algorithm (TDMA) 270
Turbulence models 252–5
Turbofan-engine combustor 280
Turbulence
  analysis of 298
  effects of combustion on 255
  see also continuous gaseous turbulent combustion
Turbulence/dispersed-phase interactions 306–7
Turbulence intensity
  due to rapid compression 53
  vs engine speed 51
Turbulence modulation 326–30
Turbulence parameters 49–51
Turbulence/radiation interaction 104–6
Turbulence spectra, modulation of 327–30
Turbulence time-scale 254
Turbulent burning zone 63
Turbulent combustion 226–34
  kinetics characteristics 231–4
  physical characteristics 227–31
Turbulent diffusion flames 269
Turbulent flame front propagation speed 60–3
Turbulent hydrogen–air flames 230
Turbulent intensity, vs intake pressure 53
Turbulent-jet diffusion flames 138–9
Two-stage ignition 187–8

Unstirred closed vessels 180

Weighted sum-of-gray-gases models 109
Well-stirred flow reactors 179
Wide-band models 107

CONTENTS OF PREVIOUS VOLUMES

VOLUME 1

Pollution Formation and Destruction in Flames — Introduction
N. A. CHIGIER

The First Half-Million Years of Combustion Research and Today's Burning Problems
F. J. WEINBERG

Kinetics of Pollutant Formation and Destruction in Combustion
C. T. BOWMAN

Mathematical Modeling of Pollutant Formation
L. S. CARETTO

Mixing and Chemical Reaction in Continuous Combustion
D. T. PRATT

Turbulent Jet Diffusion Flames
R. W. BILGER

Gas Turbine Engine Pollution
A. M. MELLOR

Pollution Formation and Control in Spark-Ignition Engines
J. B. HEYWOOD

Analysis of Pollutant Formation and Control and Fuel Economy in Diesel Engines
N. A. HENEIN

VOLUME 2

NO_x Control for Stationary Combustion Sources
A. F. SAROFIM and R. C. FLAGAN

The Characterization and Evaluation of Accidental Explosions
R. A. STREHLOW and W. E. BAKER

Fluidized Bed Combustion of Coal for Power Generation
D. ANSON

Combustion and Heat Transfer in Large Boiler Furnaces
A. M. GODRIDGE and A. W. READ

The Atomization and Burning of Liquid Fuel Sprays
N. A. CHIGIER

Fossil Energy Research and Development in ERDA
P. C. WHITE

Flaring in the Energy Industry
T. A. BRZUSTOWSKI

Turbulence and Turbulent Combustion in Spark-Ignition Engines
R. J. TABACZYNSKI

Fundamentals of Oil Combustion
A. WILLIAMS

Geothermal Energy Development
H. C. H. ARMSTEAD

Combustion Fundamentals Relevant to the Burning of Natural Gas
P. F. JESSEN and A. MELVIN

VOLUME 3

The Use of Laser Raman Diagnostics in Flow Fields and Combustion
S. LEDERMAN

Gasification: Theory and Application
K. LITTLEWOOD

Non-Electrical Uses of Geothermal Energy
E. BARBIER and M. FANELLI

The Gas-Phase Oxidation of Hydrocarbons
G. MCKAY

Synthetic Fuels and Combustion
J. P. LONGWELL

Future Fuels and Mixture Preparation Methods for Spark Ignition Automobile Engines
W. BERNHARDT

Molecular Beam Mass Spectrometry for Studying the Fundamental Chemistry of Flames
J. C. BIORDI

Instrumentation Techniques for Studying Heterogeneous Combustion
N. A. CHIGIER

Current Status of Droplet and Liquid Combustion
G. M. FAETH

A Review of Drop Size Measurement — The Application of Techniques to Dense Fuel Sprays
A. R. JONES

Propagation of Laminar Pulverized Coal — Air Flames
L. D. SMOOT and M. D. HORTON

VOLUME 4

Laminar and Turbulent Gas Dynamics in Combustors — Current Status
R. B. EDELMAN and P. T. HARSHA

Nuclear Process Heat for Coal Gasification and Hydrogen Production
K. F. KNOCHE

Gas Turbine Engine Emissions — Problems, Progress and Future
R. E. JONES

Fifty Years of Combustion Research at General Motors
W. G. AGNEW

Combustion Noise
W. C. SRAHLE

Future Jet Fuel Combustion Problems and Requirements
W. S. BLAZOWSKI

Reducing Inefficiency and Emissions of Large Steam Generators in the United States
B. P. BREEN and J. G. SOTTER

Heterogeneous Kinetics of Coal Char Gasification and Combustion
N. M. LAURENDEAU

VOLUME 5

Mineral Matter in Coal and the Thermal Performance of Large Boilers
T. F. WALL, A. LOWE, L. J. WIBBERLEY and I. McC. STEWART

Coal Dust Flames: A Review and Development of a Model for Flame Propagation
JOHN L. KRAZINSKI, RICHARD O. BUCKIUS and HERMAN KRIER

Scattering of Electromagnetic Radiation in Particulate Laden Fluids
A. R. JONES

Combustion Modeling in Two and Three Dimensions — Some Numerical Considerations
HENRY McDONALD

Phenomenological Models for Reciprocating Internal Combustion Engines
PAUL N. BLUMBERG, GEORGE A. LAVOIE and RODNEY J. TABACZYNSKI

Research and Development by British Gas into the Effective Use of Gas in Industry
M. L. HOGGARTH

***In Situ* Combustion Retorting of Oil Shale**
MELVYN C. BRANCH

Basic Considerations in the Turbulent Flame Propagation in Premixed Gases
JERZY CHOMIAK

Particulate Formation in Power Station Boiler Furnaces
M. A. NETTLETON

Incineration of Industrial Waste
R. K. TANNER

Combustion Diagnostics by Laser Raman and Fluorescence Techniques
ALAN C. ECKBRETH, PAUL A. BONCZYK and JAMES F. VERDIECK

VOLUME 6

Solar Collectors for Low and Intermediate Temperature Applications
F. KREITH, G. O. F. LOF, A. RABL and R. WINSTON

Nitric Oxide Formation from N_2 in Flames: The Importance of "Prompt" NO
A. N. HAYHURST and I. M. VINCE

The Trace Element Chemistry of Coal During Combustion and the Emissions from Coal-Fired Pl
R. D. SMITH

Unconfined Vapour-Cloud Explosions: Definition of Source of Fuel
D. J. LEWIS

Spread and Evaporation of Liquid
F. BRISCOE and P. SHAW

Methods for Predicting the Atmospheric Dispersion of Massive Releases of Flammable Vapour
R. A. COX

Unconfined Vapour-Cloud Explosions — Historical Perspective and Predictive Method Based on Incident Records
D. J. LEWIS

Risk Assessment Methods for Vapour-Cloud Explosions
L. CAVE

Catalysts for Automobile Emission Control
J. T. KUMMER

Fundamental Coal Combustion Mechanisms and Pollutant Formation in Furnaces
J. O. L. WENDT

The Hydropyrolysis of Coal to BTX
G. FYNES, W. R. LADNER and J. O. H. NEWMAN

Airblast Atomization
A. H. LEFEBVRE

Soot Control By Fuel Additives
J. B. HOWARD and W. J. KAUSCH, JR

A Review of Combustion Processes in the Dual Fuel Engine — The Gas Diesel Engine
G. A. KARIM

Post Combustion Methods for Contol of NO_x Emissions
H. S. ROSENBERG, L. M. CURRAN, A. V. SLACK, J. ANDO and J. H. OXLEY

The Determination of Laminar Burning Velocity
C. J. RALLIS and A. M. GARFORTH

Perspectives for Metal Hydride Technology
H. BUCHNER

Semi-Empirical Correlations for Gas Turbine Emissions, Ignition and Flame Stabilization
A. M. MELLOR

The Mechanisms of Transition from Deflagration to Detonation in Vapor Cloud Explosions
J. H. S. LEE and I. O. MOEN

VOLUME 7

Detailed Modelling of Combustion Systems
E. S. ORAN and J. P. BORIS

Mechanisms of Heat Transfer Between a Surface and a Gas-Fluidized Bed for Combustor Application
S. C. SAXENA and J. D. GABOR

A Review of Initial Comparisons of Computed and Measured Two-Dimensional Unsteady Flame Fields
F. V. BRACCO and P. J. O'ROURKE

The Kinetics of Thermochemistry of Chemical Oxidation with Application to Combustion and Flames
S. W. BENSON

Product Formation Mechanisms Inside a Burning Cigarette
R. R. BAKER

Automotive Engines and Fuels: A Review of Future Options
J. B. HEYWOOD

Solar Cooling and Air Conditioning
G. GROSSMAN and A. JOHANNSEN

Soot Formation
B. S. HAYNES and H. GG. WAGNER

Fundamentals of Soot Formation in Flames with Application to Diesel Engine Particulate Emissions
O. I. SMITH

Multidimensional Numerical Simulation of Reactive Flow in Internal Combustion Engines
T. D. BUTLER, L. D. CLOUTMAN, J. K. DUKOWICZ and J. D. RAMSHAW

VOLUME 8

Modeling of Unsteady Two-Phase Reactive Flow in Porous Beds of Propellant
S. S. GOKHALE and H. KRIER

Flame Radiation
C. L. TIEN and S. C. LEE

Fuel Atomization for Spray Modelling
M. M. ELKOTB

Counterflow Diffusion Flames
H. TSUJI

Sunfuels
R. J. KING

Production and Use of Biogas in Agriculture
P. N. HOBSON and N. E. H. FEILDEN

Turbulent Hydrocarbon Jet Flames
H. EICKHOFF

Recent Advances in Droplet Vaporization and Combustion
C. K. LAW

Conditional Sampling in Turbulent Combustion
P. A. LIBBY, N. CHIGIER and J. C. LARUE

Liquid Fuels for Transport
E. M. GOODGER

Sulphate Capture in Ash and Boiler Deposits in Relation to SO_2 Emission
E. RAASK

Coal Gasification—Combined Cycles for Electricity Production
T. D. BROWN

Entrainment Interface in Free Turbulent Shear Flows
R. CHEVRAY

Urban and Wildland Fire Phenomenology
F. A. WILLIAMS

VOLUME 9

Evaporation and Combustion of Sprays
G. M. FAETH

Critical Requirements in Combustion Research
L. D. SMOOT and S. C. HILL

Turbulence Properties of Flames and their Measurement
R. GUNTHER

Drop Size and Velocity Instrumentation
N. CHIGIER

Heat Pumps — Applications for Heating Conservation and Heat Recovery
E. NEAL

Toxicology of Soot
T. R. BARFKNECHT

A Perspective of Reciprocating-Engine Diagnostics without Lasers
C. A. AMANN

The Role of Pore Structure in Coal Pyrolysis and Gasification
G. A. SIMONS

Fuel Droplet Vaporization and Spray Combustion Theory
W. A. SIRIGNANO

Finding Order in Coal Pyrolysis Kinetics
P. R. SOLOMON and D. G. HAMBLEN

VOLUME 10

Chemical Kinetic Modelling of Hydrocarbon Combustion
C. K. WESTBROOK and F. L. DRYER

Thermal Radiation Hazards from Hydrocarbon Pool Fires
K. S. MUDAN

Coal Combustion and Applications
A SPECIAL ISSUE PREPARED BY THE DOE COAL COMBUSTION AND APPLICATIONS WORKING GROUP

Heat and Mass Transfer in Combustion: Fundamental Concepts and Analytical Techniques
C. K. LAW

Laminar Diffusion Flamelet Models in Non-Premixed Turbulent Combustion
N. PETERS

Small Industrial-Scale Producer Gas Units
A. BLIEK, W. P. M. VAN SWAAIJ and K. R. WESTERTERP

Pulverized-Coal Combustion Research at Brigham Young University
L. D. SMOOT, P. O. HEDMAN and P. J. SMITH

VOLUME 11

Dynamic Behavior of Premixed Flame Fronts in Laminar and Turbulent Flows
P. CLAVIN

Fuel Combustion in the Blast Furnace Raceway Zone
J. M. BURGESS

Theory of Normal Premixed Turbulent Flames Revisited
P. A. LIBBY

The Mode of Occurrence and Concentration of Trace Elements in Coal
E. RAASK

Pdf Methods for Turbulent Reactive Flows
S. B. POPE

Particulate Removal from High-Temperature, High-Pressure Combustion Gases
S. C. SAXENA, R. F. HENRY and W. F. PODOLSKI

Chemical–Acoustic Interactions in Combustion Systems
E. S. ORAN and J. H. GARDNER

Modeling of Smoldering Combustion Propagation
T. J. OHLEMILLER

Non-Ideal Equations of State for Combusting and Detonating Explosives
S. Y. WANG, P. B. BUTLER and H. KRIER

VOLUME 12

The High-Temperature Oxidation of Aromatic Hydrocarbons
K. BREZINKSY

Catalytically Stabilized Combustion
W. C. PFEFFERLE and L. D. PFEFFERLE

Pulse Combustion
A. A. PUTNAM, F. E. BELLES and J. A. C. KENTFIELD

A Survey of Recent Studies on Flame Extinction
J. JAROSINSKI

The Mode of Occurrence and Combustion Characteristics of Chlorine in British Coal
W. C. PEARCE and J. W. F. HILL

Modeling of Swirl in Turbulent Flow Systems
D. G. Sloan, P. J. Smith and L. D. Smoot

Turbulent Reacting Flows
A Special Issue Prepared By A Committee for the United States Air Force Office of Scientific Research
